AROHI SHARMA

Frontend Software Engineer
Email: arohisharma3066@gmail.com | Phone: +91 8827408094

PROFESSIONAL SUMMARY

Frontend Software Engineer with 5+ years of experience building scalable, responsive, and high-performance web applications using React.js, Next.js, Redux, TypeScript, JavaScript, HTML, and CSS. Core contributor to Booking Zone since 2021, scaling the platform to 100+ clients, 20,000+ users, and $2B+ in payments while handling 1.3M+ API requests/day (~25 req/sec peak). Experienced in frontend architecture, REST API integration, AWS-based applications, performance optimization, unit testing, and production issue resolution. Strong experience collaborating with backend, QA, design, and business stakeholders to translate requirements into reliable and maintainable solutions.

TECHNICAL SKILLS

Frontend: ReactJS, Redux, TypeScript, JavaScript (ES6+), NextJS, HTML, CSS
UI Libraries: Material UI
Cloud & Platforms: AWS Amplify, CodePipeline, CloudWatch, CodeCommit, S3, CloudFront, Git, Agile/Scrum
AI Tools: Cursor, Claude, ChatGPT
Integrations: Payment Gateways (Magensa, Datacap), Hardware Devices (iDynamo6, DynaFlex, POS, Kiosk systems), Kiosk Gamecard

WORK EXPERIENCE

SBI Cards | Secondment | July 2026 - Present

Business Analyst

- Worked on Unify, an internal Consent Management Platform under the DPDP Act, coordinating business and technical teams to ensure the Next.js admin panel and Java backend aligned with business objectives.
- Owned functional and technical documentation from RFP through go-live, translating business requirements into FSD and TDD and aligning business, technical, and downstream teams throughout delivery.
- Reviewed project documentation and Figma designs before development, driving multiple iterations to ensure UI and workflows reflected business expectations; coordinated API and file-based integrations across SBI Cards teams.
- Coordinated cross-team dependencies within a 3-month delivery timeline, managing ServiceNow and CMR procedures, WBS tracking, infrastructure and database setup, DNS and port-opening requests, and deployment dependencies.
- Managed project governance including risk assessments, source-code approvals, SBOM reviews, SIT/UAT coordination, stakeholder signoffs, and walkthroughs for downstream and testing teams.

Innodeed Systems Pvt Ltd | May 2021 - June 2026

Software Engineer | Nov 2023 - June 2026

- Led the design and scaling of high-volume booking and payment applications handling 1.3M+ API requests/day (~25 req/sec peak).
- Owned end-to-end feature delivery by translating business requirements into scalable technical solutions for complex workflows including Payments, Refunds, Slot Availability, Cancellations, Business Onboarding etc
- Spearheaded Magensa to Datacap migration across live production systems with zero customer impact.
- Leveraged Claude, ChatGPT, and Cursor regularly for debugging, code generation, workflow acceleration, and rapid prototyping as part of day-to-day development.

- Implemented Next.js SSR security enhancements and drove 30-40% performance improvements through frontend refactoring, API optimization, and REST service integration.
- Worked with AWS Amplify and CodePipeline for deployment across environments, CloudWatch for production log analysis, and AWS CodeCommit for repository and code review workflows.
- Contributed to V1 to V2 platform migration and architecture discussions, improving scalability, maintainability, and frontend system design.
- Improved engineering quality through code reviews, unit testing, reusable architecture patterns, and maintainable coding standards; authored PRDs and engineering documentation.
- Troubleshot frontend, API integration, and production issues, and collaborated with backend, QA, design, and business teams to deliver reliable solutions.
- Mentored developers and interns, transforming trainees into productive contributors, and supported hiring.

Key Achievements:

- Stabilized high-volume transaction systems processing $2B+ in payments
- Delivered scalable solutions across 100+ client locations
- Improved system reliability under peak traffic conditions

Focus Areas:

- Frontend Performance, Scalable UI Architecture, Developer Experience (DevEx), Payment Workflows

Associate Software Engineer | Nov 2021 - Oct 2023

- Built and scaled responsive React-based booking and payment applications from early-stage development to production-grade deployment.
- Integrated Magensa payment gateway with POS hardware systems (iDynamo6, DynaFlex, EMV devices) and implemented payment, voucher, gift card, Apple Pay, and Google Pay integrations.
- Built responsive, iPad-optimized booking interfaces and a QR-based game card system for real-world operations.
- Collaborated with backend, QA, design, and business teams to build scalable applications integrated with RESTful services and service-based backend systems.

Key Achievements:

- Successfully deployed solutions across 300+ iPads in 100+ outlets, enabling large-scale on-ground operations
- Enabled seamless hardware-based payment workflows in live environments
- Contributed to the foundation of a system now scaling to 1.3M+ API requests/day

Software Engineer Trainee

- Built responsive, reusable UI components and complex forms using ReactJS.
- Participated in Agile workflows and contributed to production features early.

EDUCATION

MCA, Bhilai Institute of Technology, Durg | 2021
B.Sc (Computer Science), St. Thomas College, Bhilai | 2019
